SAFETY INSTRUCTIONS

⚠️ WARNING

1. High voltage may cause serious injury from electric shock. Disconnect electrical power before starting installation or servicing. Leave power disconnected until installation/service is completed.

2. Sharp edges may cause serious injury from cuts. Use care when cutting plenum openings and handling duct work.

3. Dropping may cause personal injury or equipment damage. Handle with care and follow installation instructions.

⚠️ CAUTION

1. Read all instructions before beginning installation.

2. This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.

3. Do not use in pool applications. Pool chemicals can damage the dehumidifier.

4. Do not use solvents or cleaners on or near the circuit board. Chemicals can damage circuit board components.

5. Wait 24 hours before running the unit if it was not shipped or stored in the upright position.

6. If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.

- Ø 3/4” FNPT Drain
- 17-5/8
- 25
- 32-11/16
- 35
- 37
- 24
- Up to 1/2” Diameter Rod
UNPACKING THE DEHUMIDIFIER

Use the cut line on the carton to pull carton off dehumidifier.

INCLUDED IN THE CARTON

- Dehumidifier
- Installation manual
- Hanging brackets
- Model A76 control
- 3/4” P-Trap
- 3/4” MNPT x 3/4” hose barb fitting
- 3/4” MNPT x 3/4” female pipe
- 3/4” FNPT x 3/4” female pipe
- 10 feet of 3/4” clear PVC flexible drain hose
- Terminal screwdriver
- 30 feet of thermostat cable
- MERV 11 filter

LOCATION CONSIDERATIONS

This appliance is classified as not to be accessible to the general public. The dehumidifiers should be spaced evenly throughout the area to be dehumidified with the following recommendations:

1. Avoid placement where the discharge of one dehumidifier is pointing toward the inlet of another.
2. Avoid locating the dehumidifier inlet too near a supply register. Space is not usually available to totally avoid this, but minimizing the amount of cold air that is discharged to the dehumidifier inlet will improve moisture removal performance of the dehumidifier.
3. Account for handling dehumidifier condensate by considering drain or sump pump locations.
4. Leave appropriate room on the drain side of the dehumidifier for wiring and service.
5. Allow sufficient space near the inlet (6” minimum) to be able to remove/install a filter. More space ensures no loss of airflow due to restriction at the inlet.
The 5789 leveling feet kit (not included) is required for floor mounting. The drain hose must continuously slope downward toward the drain. Use solid supports as needed to elevate the unit enough to allow for continuous drain slope. Use the adjustable feet to level the unit right to left and front to back so that unit drains properly.
SUSPENDING THE DEHUMIDIFIER

INSTALL BRACKETS FOR SUSPENDING UNIT

The brackets are designed to accommodate up to 1/2” threaded rod.

1. Insert bracket into slots on the base. See FIGURE 5.

2. Rotate the bracket up toward the dehumidifier and secure the bracket to the side of the dehumidifier using #12 sheet metal screws (provided). See FIGURE 6.

3. Repeat for remaining three brackets.

HANGING THE DEHUMIDIFIER

Use the threaded rod to suspend the unit from appropriate ceiling structure. The unit weight is 180 lbs. Install vibration isolators if located in an area where noise could be a concern. Level unit right to left and front to back so that unit drains properly.

DUCTING

Use duct kit part number 5807 for installing ductwork to the dehumidifier. Maximum external static pressure is 0.2” w.c.
**DRAIN INSTALLATION**

The blower draws air through the dehumidifier, putting the cabinet under negative pressure. As a result, the included P-trap is required for proper draining. The installed drain fitting on the dehumidifier is 3/4" FNPT. Use the included fittings to trap and install the drain. See **FIGURE 8**. The drain tubing can be hard pipe or clear flexible tubing. **NOTE:** PTFE thread seal tape is recommended for the threaded connections and hand tighten only. Use PVC primer and cement for all slip fit connections to prevent leaks. After installing the drain connections, trap, and tubing, pour enough water (about 2 pints) into the dehumidifier drain pan to prime the trap.

![FIGURE 8 - DRAIN ASSEMBLY](image)

**CONDENSATE PAN, CONDENSATE PUMP AND FLOAT SWITCH**

A condensate pan is recommended when suspending the dehumidifier over finished areas or product. Adhere to local codes regarding draining of the condensate pan. If a condensate pump is needed, install it in the condensate pan as well.

Install a condensate overflow safety switch (i.e. float switch) in the condensate pan, remove the factory installed jumper wire between the Float Switch terminals on the control and wire the float switch to the dehumidifier as shown in **FIGURE 9**. Overflow safety switches on condensate pumps can be wired to the Float Switch terminals in a similar fashion.

![FIGURE 9 - FLOAT SWITCH WIRING](image)
**HARD WIRING – LINE VOLTAGE**

**CAUTION**

If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.

The A320V1 dehumidifier comes with a power cord that has a NEMA 6-20P plug that can simply be plugged into a corresponding NEMA 6-20R receptacle. The A320V3 dehumidifier comes with a power cord that has a NEMA L7-20P plug that can simply be plugged into a corresponding NEMA L7-20R receptacle. The plug can be removed and replaced by hard-wired electrical service if desired.

**United States Installation:** Make all electrical connections in accordance with the current edition of the NEC ANSI/NFPA 70 and any local codes or ordinances that may apply.

**Canada Installation:** Make all electrical connections in accordance with the current edition of the Canadian Electrical Code CSA C22.1 and any local codes or ordinances that may apply.

<table>
<thead>
<tr>
<th>Model A320V1</th>
<th>Model A320V3</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Voltage</strong></td>

</tr>
<tr>
<td><strong>Minimum Circuit Ampacity</strong></td>
<td>15A</td>
</tr>
<tr>
<td><strong>Maximum Fuse or Circuit Breaker Size</strong></td>
<td>25A</td>
</tr>
</tbody>
</table>

1. Disconnect electrical service at the main fuse or circuit breaker.
2. Run electrical service to where the dehumidifier is to be installed following all required local and national codes and standards.
3. Remove the side panel from the dehumidifier.
4. Loosen the terminal screws securing the power cord wires to the terminal blocks and ground lug.
5. Use channellock pliers to remove the strain relief and power cord from the unit. Pinch the side of the strain relief to release it from the opening in the sheet metal and pull it away from the dehumidifier.
6. Route the service wires through the opening in the dehumidifier and secure the cable or conduit to the opening in the dehumidifier using fittings/clamps intended for the conduit/cable used.
7. Insert the black service wire into the L1 terminal and the white service wire into the L2 terminal. Secure the wires into the terminals by tightening the terminal screws.
8. Insert the ground wire (bare or green) of the electrical service into the ground lug and secure it in place by tightening the ground lug screw.
9. Reattach the side panel to the dehumidifier.
10. Restore electrical service at the fuse or circuit breaker.

**FIGURE 10 – HARD WIRING TO REPLACE THE POWER CORD**
NOTE: Use 18-22 AWG wire for control wiring.

Humidity can be controlled using the internal dehumidifier control, a Model A76 control or a different external control like a thermostat.

Without an external control, the dehumidifier will turn on its blower for three minutes every 15, 30 or 45 minutes depending on how often the unit is set to sample the air. The dehumidifier can also be set to sample the air continuously (see AIR SAMPLING on page 11). The blower is turned on to get a representative reading of the room relative humidity. A shorter sampling period reduces the duration of any humidity spikes that might occur when neither the air conditioning nor the dehumidifier are running. To reduce energy consumption the sampling time can be set to a longer period.

Installing an external control eliminates the need to run the dehumidifier blower for sampling as the control is constantly measuring the humidity close to the canopy. When the humidity level rises above the setting, the dehumidifier is turned on.

To install the Model A76 control:

1. Unplug the dehumidifier or turn off power to the circuit at the breaker or fuse.
2. Run a 4-wire thermostat cable (use 18–22 AWG wire) from the Model A76 to the control of the dehumidifier.
3. Trim about 1/4" of insulation from the end of the wires on each end. Insert the wire into the terminals as shown in FIGURE 11 and tighten to secure.
4. Restore dehumidifier power. There is a delay of three minutes after restoring power before the dehumidifier will respond to the control.
5. Go to REMOTE CONTROL on page 10 to configure the dehumidifier control to respond to the Model A76.

The Model A76 will measure the relative humidity and turn the dehumidifier on and off to control the humidity level to the desired setting. The humidity setting can be adjusted from the control while the display allows easy access and monitoring of the humidity level in the space. It is recommended that the Model A76 be mounted at/near canopy height. Shield the Model A76 from direct exposure to HPS or LPS lighting.

Press the ON button on the Model A76 to turn on the control. The UP/DOWN arrow buttons are used to set the desired humidity setting. At all other times, the Model A76 will display the measured humidity level. Reference the Model A76 Installation and Operating Instructions for set-up.

ALTERNATE EXTERNAL CONTROLS

An 8800 Series thermostat can be used to control the HVAC equipment, and for dehumidifier control in place of the Model A76. The 8800 Series thermostat has Wi-Fi capability so the conditions in the room can be monitored at any time from any location. Additionally, up to four remote sensors can be mounted near the canopy and connected to a single thermostat. The four humidity measurements can be averaged and the thermostat will turn on the dehumidifier based on the averaged value.

Reference the thermostat Installation Instructions and Owner’s Manual for wiring, set-up and operating details.
**SYSTEM SET-UP & CHECKOUT**

Skip set up and proceed to **INSTALLER TEST MODE** on page 11 unless:

- A Model A76 or other external control is to be installed
- changing the air sampling rate

1. Check all wiring.
2. Make sure the wire access cover has been snapped back onto the on-board control.
3. Plug unit in and turn power switch to ON.
4. The on-board control screen should display **OFF**.

**NOTE:** If the display backlight is not on, the first button press (any button) will only turn on the backlight. Press the button a second time to achieve function.

5. Hold the MODE button on the on-board control for 3 seconds to enter the Installer Set-up Menu.
6. Navigate through the following screens to set up the dehumidifier for the installed application.
   - Use the UP or DOWN arrows to select items and use MODE to switch to the next set-up option. To exit installer set-up, all options must be scrolled through using the MODE button.
7. After the installer set up options have been completed, **DONE** will blink for 3 seconds and the control will return to the **OFF** screen.

---

### REMOTE CONTROL

<table>
<thead>
<tr>
<th><img src="remote_control_1.png" alt="Image" /></th>
<th>If not installing a Model A76, leave DISABLED and press MODE to go to the next screen.</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="remote_control_2.png" alt="Image" /></td>
<td>If installing a Model A76, press the UP or DOWN button to change to ENABLED and then press MODE to go to the next screen.</td>
</tr>
</tbody>
</table>

### VENTILATION / AIR CYCLING

The ventilation feature can be used for air cycling if desired. The air cycling time can be set from 0 – 60 minutes. The dehumidifier will turn on the dehumidifier fan to cycle air for the set time, every hour.

| ![Image](ventilation_1.png) | If not using the dehumidifier to cycle air, press MODE to got to the next screen. |
| ![Image](ventilation_2.png) | If using the dehumidifier for air cycling, press the UP or DOWN button to ENABLE the feature and press MODE to got to the next screen. |
| ![Image](ventilation_3.png) | Press MODE to set air cycling to TIMED. |
| ![Image](ventilation_4.png) | Press the UP or DOWN buttons to adjust the air cycling time per hour from 0 to 60 minutes. After adjusting the time press MODE to go to the next screen. |
EXTERNAL CONTROL

If using the dehumidifier on-board control, leave DISABLED and press MODE to go to the next screen.

If using an 8800 Series thermostat as an external control, use the UP or DOWN button to select ENABLED, then press MODE to go to the next screen.

AIR SAMPLING

Use the UP or DOWN button to adjust how frequently the dehumidifier samples the air to determine whether or not to dehumidify. Fewer minutes means the dehumidifier will sample more frequently to minimize humidity swings, but increases cost to operate due to more frequent fan operation. Press MODE when done to move to the next screen.

RH OFFSET

An offset can be applied to the on-board humidity reading to avoid discrepancies with other humidity measuring devices in the home. Use the UP/DOWN arrows to select an offset from -5% to 5%. Press MODE to exit the installer set-up screens.

INSTALLER TEST MODE

If everything is properly wired, the dehumidifier and all of the wired components will turn on and off during Installer Test Mode to demonstrate that all are properly operating. Installer Test Mode lasts for four (4) minutes. If the ON/OFF button is pressed during test mode, the dehumidifier will exit Installer Test Mode and return to the OFF screen.

DEHUMIDIFICATION ONLY

If the dehumidifier is not already OFF, press the ON/OFF button to turn it off.

Press and hold the ON/OFF button and MODE buttons for 3 seconds. The measured humidity, AIR SAMPLING and TEST will show on the display.

After three (3) minutes the dehumidifier compressor will turn on and DEHUMIDIFYING will replace AIR SAMPLING on the control screen.

After one minute of compressor operation, all outputs will turn off and DONE will blink for 3 seconds and then return to the OFF screen.
START UP AND SEQUENCE OF OPERATION

USING THE DEHUMIDIFIER CONTROL

1. Press the ON/OFF button to turn the dehumidifier control ON. The display will show the current setting, and the dehumidifier blower will turn on to start sampling the air.

   The setting will be replaced by the measured humidity and “AIR SAMPLING” will show on the display.

2. Use the UP or DOWN button to adjust the humidity setting as desired.

3. After three (3) minutes of sampling, the measured humidity will be compared to the setting:
   a. If the humidity is above the setting, the dehumidifier compressor turns on and “AIR SAMPLING” will be replaced by “DEHUMIDIFYING”. The compressor remains on until the measured humidity falls 3% RH below the setting.
   b. If the measured humidity is below the setting, the blowers turn off and the display returns to showing the RH setting.

4. The dehumidifier will sample again after the number of minutes selected during the Air Sampling portion of the System Set Up (see page 11), or any time the humidity setting is lowered.

USING THE MODEL A76 CONTROL

1. Press the ON/OFF button to turn the dehumidifier control ON. “REMOTE” will show on the display to indicate that an external control is wired to the dehumidifier.

2. At the Model A76, press the ON button; the Model A76 will display the measured RH.

3. Use the UP or DOWN button on the Model A76 to adjust the humidity setting as desired.

4. If the RH measured by the Model A76 rises above the setting, the dehumidifier will turn on. “DEHUMIDIFYING” will appear on the dehumidifier control display to show that the Model A76 is calling for dehumidification. The dehumidifier will turn off when the RH measured by the Model A76 drops 3% RH below the setting.
Technical Support is available Monday through Friday, 7:00 a.m. to 5:00 p.m. CST, at (800) 972-3710. Use the guides on the following pages to identify and correct system faults. Contact Technical Support before replacing the unit or any components and for additional troubleshooting.

### TABLE 1 – DIAGNOSTIC CODES

<table>
<thead>
<tr>
<th>Diagnostic Code</th>
<th>Failure Mode</th>
<th>Action</th>
<th>Reset</th>
</tr>

<tbody>
<tr>
<td>E1</td>
<td>Internal Humidity or Temperature Sensor Open or Shorted</td>
<td>1. If connection okay, replace User Interface, Part No. 5738.</td>
<td>Cycle Power</td>
</tr>
<tr>
<td>E2</td>
<td>High Refrigeration Pressure</td>
<td>1. Verify that the fan works and there is no blocked or restricted ductwork. 2. If the fault persists, call Technical Support.</td>
<td>Cycle Power</td>
</tr>
<tr>
<td>E3</td>
<td>Model A76 Remote Control Communication Loss</td>
<td>1. Check connections between Model A76 and dehumidifier control board. Terminals should be fully inserted and secured in the control board and Model A76 control terminals. 2. If connections are correct and secure, turn off the dehumidifier and remove the Model A76. Use a short section of 4-wire cable to reconnect the Model A76 to the control board. Turn the dehumidifier back on and increase the dryness level setting on the Model A76. If the dehumidifier turns on, the problem is with the wiring between the dehumidifier and control. 3. If the dehumidifier does not turn on, call Technical Support.</td>
<td>Self-Correcting</td>
</tr>
<tr>
<td>E4</td>
<td>Insufficient Capacity</td>
<td>1. Check the frost sensor connection at the power board. Terminal should be fully seated on the power board pins. 2. Remove the side access panel and verify that the sensor is secured to the suction line. 3. If the sensor is connected and secured to the refrigeration line proceed to the next step. 4. Reset the fault by cycling power to the dehumidifier. 5. Turn the humidity setting down (below room/home humidity level) to make a dehumidification call. 6. Allow the fan and compressor to run for approximately 10-15 minutes and then enter diagnostic test mode by simultaneously pressing the UP ARROW and MODE buttons for 3 seconds. The LCD will display the temperature measured by the internal sensor while also displaying AIR SAMPLING and ON, the humidity measured by the internal sensor while also displaying %RH and ON, and the frost sensor temperature while also displaying ON. Scroll through these values and by using the UP/DOWN arrow buttons. 7. Record values and call Technical Support.</td>
<td>Cycle Power</td>
</tr>
<tr>
<td>E5</td>
<td>High Temperature Thermistor Failure</td>
<td>1. Check the high temperature sensor connection at the power board. Terminal should be fully seated on the power board pins. 2. Remove the side access panel and verify the sensor is not damaged and connected to the refrigeration line coming from the compressor. 3. If the sensor is connected and secured to the refrigeration line, it may need to be replaced with Part No. 5456 – contact Technical Support to confirm.</td>
<td>Cycle Power</td>
</tr>
<tr>
<td>E6</td>
<td>Low Temperature Thermistor Failure</td>
<td>1. Check the low temperature sensor connection at the power board. 2. Remove the side access panel and verify the sensor is not damaged and connected to the suction line. 3. LIMITED WARRANTY

Your Research Products Corporation Anden™ Dehumidifier is expressly warranted for five (5) years from date of installation to be free from defects in materials or workmanship.

Research Products Corporation's exclusive obligation under this warranty shall be to supply, without charge, a replacement for any component which is found to be defective within such five (5) year period and which is returned not later than thirty (30) days after said five (5) year period by you to either your original supplier or to Research Products Corporation, Madison, Wisconsin 53701, together with the model number and installation date of the dehumidifier.

THIS WARRANTY SHALL NOT OBLIGATE RESEARCH PRODUCTS CORPORATION FOR ANY LABOR COSTS AND SHALL NOT APPLY TO DEFECTS IN WORKMANSHIP OR MATERIALS FURNISHED BY YOUR INSTALLER AS CONTRASTED TO DEFECTS IN THE DEHUMIDIFIER ITSELF.

IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE SHALL BE LIMITED IN DURATION TO THE AFORESAID FIVE YEAR PERIOD. RESEARCH PRODUCTS CORPORATION'S LIABILITY FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES, OTHER THAN DAMAGES FOR PERSONAL INJURIES, RESULTING FROM ANY BREACH OF THE AFORESAID IMPLIED WARRANTIES OR THE ABOVE LIMITED WARRANTY IS EXPRESSLY EXCLUDED. THIS LIMITED WARRANTY IS VOID IF DEFECT(S) RESULT FROM FAILURE TO HAVE THIS UNIT INSTALLED BY A QUALIFIED HEATING AND AIR CONDITIONING CONTRACTOR. IF THE LIMITED WARRANTY IS VOID DUE TO FAILURE TO USE A QUALIFIED CONTRACTOR, ALL DISCLAIMERS OF IMPLIED WARRANTIES SHALL BE EFFECTIVE UPON INSTALLATION.

Some states do not allow limitations on how long an implied warranty lasts or the exclusion or limitation of incidental or consequential damages so the above exclusion or limitations may not apply to you.

This warranty gives you specific legal rights and you may also have other rights which vary from state to state.

WARRANTY REGISTRATION

Visit us online at anden.com to register your Anden product. If you do not have online access, please mail a postcard with your name, address, phone number, email address, product purchased, model number, date of purchase, and dealer name and address to: Research Products Corporation, P.O. Box 1467, Madison, WI 53701.

Your warranty registration information will not be sold or shared outside of this company.
